BOYINI SRIKARAN

Software Developer

+91-7780206446 srikaran.boyini2911@gmail.com linkedin.com/in/boyini-srikaran/

Summary

Results-driven Software Engineering student with strong foundations in Data Structures, Algorithms, and Operating Systems, experienced in building scalable full-stack and AI-powered applications. Proficient in Java, Python, JavaScript, React.js, and Node.js with hands-on experience developing RESTful services and data-driven systems. Skilled in designing modular, scalable solutions leveraging cloud and microservices concepts. Passionate about applying AI and software engineering principles to automate workflows, optimize performance, and deliver reliable, user-centric solutions in collaborative environments.

Skills

Programming: C, Java, Python, JavaScript

Core Computer Science: Data Structures & Algorithms, Operating Systems, OOPs
Web Development: HTML, CSS, Bootstrap, Node.js, Express.js
Databases: MongoDB, MySQL
AI & ML: Lang Chain, RAG, Hugging Face, NLP, Scikit-learn
Cloud: AWS

Work Experience

AI Internship – VISWAM.AI (Supported by Meta & IIIT Hyderabad) | Jun 2025 – Jul 2025
• Completed a 4-week intensive internship focused on Artificial Intelligence and real-world problem solving.
• Worked on AI-based solution development involving machine learning workflows and practical model implementation.
• Gained hands-on exposure to NLP concepts, data processing, and applied AI system design.

Projects

AI-Powered Template Generation Engine | *Python, React.js, Node.js, Chroma DB* *Link*

- Designed and developed an AI-powered report automation system to eliminate repetitive manual document generation across multiple formats.
- Built scalable backend services using Node.js and RESTful APIs integrated with React.js frontend for seamless user interaction.
- Implemented vector database retrieval using Chroma DB to process multimodal data efficiently and improve information retrieval performance.
- Applied microservice-oriented architecture principles to enable modularity, scalability, and maintainability.
- Optimized processing workflows, reducing report generation time by 65% and improving document standardization.

College Admission Predictor (NLP Enhanced) | *Python, Stream lit, Scikit-learn, TF-IDF* *Link*

- *Developed a machine learning–based admission prediction system to evaluate applicant success probability using both structured academic data and unstructured SOP/LOR text.*
- *Implemented NLP pipelines using TF-IDF vectorization and sentiment analysis to extract meaningful features from textual documents.*

- *Trained and evaluated predictive models using Scikit-learn, achieving 91% prediction accuracy.*
- *Deployed the application using Stream lit with modular backend design enabling real-time prediction and user interaction.*
- *Designed scalable data processing workflows integrating machine learning with web-based interfaces for improved decision support.*

Certifications

- **Techolution Hackathon (MNC) 2025 :** Participated in "Building Al with C.A.R.E" hackathon, enhancing creativity, problem-solving, and teamwork in a global MNC environment.
- **COSC Hack week (CBIT / Geeks for Geeks) 2025 :** Ranked 20th among 200 participants while contributing to open-source hackathon projects by developing scalable web components, optimizing code performance, and collaborating on real-time solutions.
- **Adobe India Hackathon (Unstop) 2025:** Strengthened problem-solving and coding skills through competitive MCQ and coding assessments.

Education

BE Computer Science and Engineering **Passout: 2026**
Neil Gogte Institute Of Technology, Hyderabad *CGPA: 8.2 / 10*

Intermediate **Passout: 2022**
Sri Chaitanaya Junior College *CGPA: 9.3 / 10*

Schooling **Passout: 2020**
Sri Chaitanaya Techno School *CGPA: 10 / 10*

Hobbies

• Music exploration • AI and tech blogging • Emerging digital trends • Creative storytelling
